

José Pedro GRANADO OLMO

ABOUT ME

Master's student in Microelectronics: Design and Applications of Micro/Nanoscale Systems at the University of Seville. I am a responsible, hardworking person with a strong willingness to learn. My main areas of interest within physics are electronics and programming, especially focused on circuit simulation.

PERSONAL INFORMATION

Age: **25**
Languages: **Spanish** (native), **English** (B1 Cambridge Certificate)
Residence: **Seville**
Driver's license: **Yes**

EDUCATION

MASTER'S IN MICROELECTRONICS: DESIGN AND APPLICATIONS OF MICRO/NANOSCALE SYSTEMS **2025-Present**
University of Seville

BACHELOR'S DEGREE IN PHYSICS **2019-2025**
University of Seville

TECHNOLOGICAL SCIENCES HIGH SCHOOL DIPLOMA **2017-2019**
I.E.S. Itálica

Honors

With Honors (Highest Distinction)

SKILLS

- ◇ **Programming languages:** MATLAB, Python, Verilog.
- ◇ **Development tools:** Git, GitHub, Inkscape, Docker.
- ◇ **Design and simulation software:** SPICE, Cadence Virtuoso, ModelSim, Xilinx Vivado & Vitis, Synopsys Design.
- ◇ **Office software:** $\text{\LaTeX}$, Microsoft Office, Google Workspace.

INTERESTS

- ◇ **Electronics:** I have completed the courses in the Physics degree that make up the specialization in Electronics and Electromagnetism, as well as a Bachelor's Thesis focused on electronics, instrumentation, and programming.
- ◇ **Programming:** I learned MATLAB through university, and Python and Arduino in a self-taught manner. I am also currently getting started with Verilog programming during the Master's in Microelectronics.
- ◇ **Open-source projects:** I am familiar with the use of open-source projects such as Arduino, and I have made contributions through the GitHub platform.

PROJECTS

- ◇ **Curve Tracer:** This project is part of my Bachelor's Thesis at the University of Seville, where I developed a program in both MATLAB and Python to create a Graphical User Interface (GUI) for characterizing diodes and MOSFET transistors using the National Instruments myDAQ data acquisition system.
- ◇ **HDLStudio:** A modern IDE for digital hardware design (Verilog/SystemVerilog/VHDL). It features an editor with syntax highlighting, simulation capabilities (Icarus/Verilator), a waveform viewer (GTKWave), Yosys synthesis, place & route for iCE40 FPGAs, a schematic viewer, and a Python plugin system. Distributed as a standalone installer for Windows (approx. 100 MB) and as a Docker image. Created 100% with AI.
